

Problem Statement of Zepto

Delivery

Key Columns Available in Dataset:-

Company, Order ID, City, Product Category, Order Value, Discount Applied, Delivery Time, Distance, Customer Rating, Delivery Partner Rating

Problem-1 Delivery Delay Prediction (Operational Efficiency)

Business Problem: Predict whether an order will breach the promised delivery window (e.g. cross 10-15 min SLA) based on distance, city, time of day, item count and delivery partner rating. Why it's real-time / relevant: Every q-commerce company (Zepto, Blinkit, Instamart) tracks SLA breaches in real time because it directly drives customer churn, refunds and dark-store staffing decisions. This is one of the top real-time monitored KPIs at these companies

Deliverables

1. **Data Preparation & Modeling (Python):** Clean and transform the raw dataset for analysis.
2. **Data Analysis (SQL):** Organize the data into a structured format, simulate business transactions, and run queries to extract insights on customer segments, loyalty, and purchase drivers.
3. **Visualization & Insights (Power BI):** Build an interactive dashboard that highlights key patterns and trends, enabling stakeholders to make data-driven decisions.
4. **Report and Presentation:** Write a clear project report summarizing your key findings and business recommendations. Prepare a presentation that visually communicates insights and actionable recommendations to stakeholders.
5. **GitHub Repository:** Include all Python scripts, SQL queries, and dashboard files in a well-structured repository.
